[YOUR AGENCY] · AI SEARCH VISIBILITY REPORT · 2026-10-20

Client A

White-label sample: the agency name sits where "[Your Agency]" appears, with no other mark. The client's name is replaced with "Client A". Every other name and number is as the four AI engines gave them on 20 October 2026.

Client A was named in 7 of 24 AI answers (29%). ChatGPT named it in 0 of 6, while AlayaCare was named in all 24.

We asked 3 home care buyer questions twice each in ChatGPT, Gemini, Perplexity and Claude. Client A was named in 7 of 24 answers: Perplexity 4 of 6, Claude 2 of 6, Gemini 1 of 6, ChatGPT 0 of 6. The pattern follows the sources: Perplexity cited Client A's website in 4 answers and named Client A in each of them, while ChatGPT built all 6 answers from other vendors' websites and never cited Client A's website. On "alternatives to WellSky", Client A was named in 1 of 8 answers; AxisCare was named first in all 8.

Question by question

How many runs named Client A, per engine.

BUYER QUESTION	CHATGPT	GEMINI	PERPLEXITY	CLAUDE
What's the best home care management software for multi-state agencies?	0/2	0/2	**2/2**	**1/2**

Which home care platforms combine scheduling, EVV, clinical documentation, and billing?	0/2	**1/2**	**2/2**	0/2
What are the best alternatives to WellSky for home care agencies?	0/2	0/2	0/2	**1/2**

Sites the AI engines cited most

Being listed, reviewed or mentioned on these sites is often what gets a company named.

SITE	ANSWERS CITING IT
alayacare.com	16
axxess.com	10
axiscare.com	10
hhaexchange.com	9
alorahealth.com	7
kantime.com	5
Client A's website	5
capterra.com	5
caresmartz360.com	4
g2.com	4
knowledge.hhaexchange.com	3
wellsky.com	3
gitnux.org	3
softwareadvice.com	3
tadabase.io	3

The five fixes that matter most

1. **Give ChatGPT a page that answers each buyer question**

   ChatGPT cited only vendors' own websites in its 6 answers: axxess.com in 6, alayacare.com in 5, hhaexchange.com in 4. It cited Client A's website in none and named Client A in none. When an engine did read Client A's website (Perplexity, 4 answers), it named Client A every time.

   Publish one page per buyer question, titled with the question in plain words ("Home care software for multi-state agencies"; "Scheduling, EVV, clinical documentation and billing in one system"). Answer it in the first sentence: what you do, for which service lines, in which states. Then the specifics. Keep it as page text, not images or PDFs.

2. **Build a "WellSky alternatives" page**

   On "What are the best alternatives to WellSky for home care agencies?", Client A was named in 1 of 8 answers. AxisCare was named first in all 8, and AxisCare, AlayaCare and Axxess were each named in 8 of 8.

   Publish a Client A vs WellSky Personal Care page: who should switch, what moves over (clients, caregivers, billing history), how long the switch takes, and a short table of differences. Link it from the main navigation or footer so it gets crawled.

3. **Get reviewed on the sites Claude reads**

   Claude cited Capterra in 5 of its 6 answers, G2 in 4 and Software Advice in 3. Neither of Claude's 2 answers that named Client A cited Client A's website; both drew on review and comparison sites (G2, Software Advice, SelectHub).

   Complete your profiles on Capterra, G2 and Software Advice in the home care and home health categories. Ask 10 current agency customers for a review this month. Reviews that mention EVV, billing and multi-state use match the questions buyers ask.

4. **Close the gap on the all-in-one question**

   On "Which home care platforms combine scheduling, EVV, clinical documentation, and billing?", Client A was named in 3 of 8 answers. AlayaCare and Axxess were named in 8 of 8 and Alora in 6. Perplexity, which read Client A's website, named Client A in both of its answers to this question; ChatGPT and Claude named it in none.

   On the product page, name all four functions in one sentence near the top, then list the state EVV aggregators you connect to. Add an FAQ section that uses the buyer questions above as headings, with 2 to 3 sentence answers, marked up as FAQPage structured data.

5. **Measure the same 24 answers again in 30 days**

This report is a baseline: 7 of 24, with ChatGPT at 0 of 6. AI answers shift week to week, so one re-check after the pages above are live shows which fix moved which engine.

Re-run the same 3 questions in the same 4 engines, twice each, about 30 days after the new pages are published and crawled. Compare per engine, not just the total.

Method: each question was put to each engine 2 time(s) on 2026-10-20, each in a fresh session with live web search available: ChatGPT through OpenAI's Codex tool, Gemini through Google's Antigravity tool, Perplexity through its own web app, and Claude (Sonnet) through Claude Code. Codex and Antigravity are developer tools built on the same model families as the ChatGPT and Gemini apps, but the apps can word answers and choose sources differently. A product named in a question is not counted as recommended for that question. AI answers vary between runs, users and locations, so these are sampled percentages, not fixed rankings. A company counts as named when its name or domain appears in the answer. 0 request(s) failed and are excluded. Prepared by [Your Agency] for Client A.
